

IONSQUARE

COMPANY OVERVIEW

Established in 2001, privately owned Ionsquare Ltd provides the applications and technologies that give our clients the competitive edge they need. With over four years of experience developing and deploying server side, desktop and mobile applications, Ionsquare delivers quality software on budget and on time.

Ionsquare has positioned itself as the IT consultancy specializing in working with start-up companies and spin-off ventures. By letting Ionsquare develop their IT infrastructure from the ground up, our customers are able to focus on their core business and improve overall performance.

Ionsquare offer IT consultancy services to companies needing to establish or assert their online and mobile presence. These services include, but are not limited to, consulting and business case development, web and graphics design, as well as software design and implementation.

The diverse team of software developers, engineers and designers is supported by a network of contacts in related fields and academia. Backed by experience in a number of sectors of the IT industry, we can find the most ingenious and cost-effective solution to your problem.

In addition to its technology assets, Ionsquare has strong contacts with a number of entrepreneurial networks. With the help of our strategic, marketing and funding partners we can help you turn a viable business idea into a profitable venture.

APPROACH

Ionsquare has a straightforward approach to the software development process: we focus on simplicity and emphasize the importance of communicating both within the company and with our clients throughout the project.

We break each project down into manageable modules each of which can be assigned to a small team of as few as

two developers. By employing only the best of the crop, we create a vibrant and stimulating working environment while maintaining a small core team. This also allows us to strike an optimal balance between development efficiency versus the amount of supervision and communication required.

To keep our development team motivated and our customers satisfied, we avoid reinventing the wheel at all costs. Having worked both with proprietary APIs and open source alternatives, we aim to maintain an unbiased stance when it comes to relying on third party components.

By taking an iterative approach to development and having frequent milestones, we ensure that we meet the project requirements. The code produced is peer reviewed, ensuring that the code base can be easily maintained beyond the project cycle.

Rather than taking on very large projects in one go, we prefer to first deliver a fully working version of the product with a minimal set of features. This helps us and our customers keep expenses under control and at the same time allows us to quickly respond to the inevitable changes in the specification.

CONTACT Us

We are proactively seeking new partners and start-up ventures. If you are part of a team working on a new idea and have some questions regarding the technology side of your business, why not get in touch with us?

Ionsquare provides confidential sessions presenting you with an opportunity to discuss your idea with IT professionals and receive crucial advice completely free of charge.
